

**Scientech AB103 Pre-emphasis and De-emphasis Circuits** is a compact, ready to use experiment board for Pre-emphasis and De-emphasis circuits. This board is useful for students to study and understand the process of pre-emphasis and de-emphasis networks primarily used to overcome the noise effects in Frequency modulation/demodulation.

Scientech Analog Electronics Experiment Boards are designed as a comprehensive Modular solution for beginners to explore the fundamentals of a variety of basic building blocks in Analog Electronics. The boards are very user friendly and support self learning through flexibility of making circuit connections. Schematic diagrams on the boards provide easy understating of the concepts. Test points are provided to observe the waveforms/ signals and to measure voltages at different nodes. The boards can be used as standalone unit with external Function Generator or can be used with Scientech Analog Labs; Scientech 2612/ Scientech 2612A / Scientech 2613. These labs have built in DC Power Supply, AC Power Supply, Function Generator, Modulation Generator, Continuity Tester, Toggle Switches, and Potentiometers. Product Tutorial with theory, description, explanation, procedure, references and results is available online on [www.ScientechLearning.com](http://www.ScientechLearning.com) .

## Features

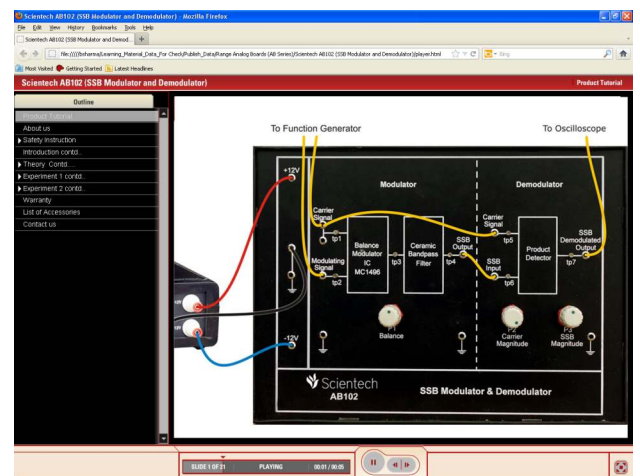

- On board test points to observe signals
- On board schematic diagram
- Flexibility of making circuit connections
- Light weight & compact
- Online Product Tutorial

## Scope of Learning

- To understand the principle of Pre-emphasis and De-emphasis circuits and the measurement of their operating characteristics

## Optional

- Simtel Analog Electronics Software

Online Product Tutorial
