

AD-01 DC Power Supply (optional)

Sciencetech AB15 Common Emitter Amplifier is a compact, ready to use Common Emitter Amplifier experiment board. This is useful for students to understand the operation of Common Emitter Amplifier and to study various operational parameters such as voltage gain, input & output impedance, current gain of the amplifier.

Sciencetech Analog Electronics Experiment Boards are designed as a comprehensive Modular solution for beginners to explore the fundamentals of a variety of basic building blocks in Analog Electronics. The boards are very user friendly and support self learning through flexibility of making circuit connections. Schematic diagrams on the boards provide easy understating of the concepts. Test points are provided to observe the waveforms/ signals and to measure voltages at different nodes. The boards can be used as standalone unit with external DC Power Supply and Function Generator, or can be used with Sciencetech Analog Labs; Sciencetech 2612/ Sciencetech 2612A / Sciencetech 2613. These labs have built in DC Power Supply, AC Power Supply, Function Generator, Modulation Generator, Continuity Tester, Toggle Switches, and Potentiometers. Product Tutorial with theory, description, explanation, procedure, references and results is available online on www.SciencetechLearning.com.

Features

- On board test points to observe signals
- On board schematic diagram
- Flexibility of making circuit connections
- Light weight & compact
- Online Product Tutorial

Scope of Learning

- Study of the Common Emitter Amplifier (NPN) and evaluation of
 - Operating point of the amplifier, Voltage gain, Input and output impedance and Current gain of the amplifier

Optional

- AD-01 DC Power Supply ($\pm 12V$, $\pm 5V$)
- Sintel Analog Electronics Software

Online Product Tutorial
