

AD-01 DC Power Supply (optional)

Scientech AB65 Phase Shift Oscillator is a compact, ready to use Phase Shift Oscillator experiment board. This board is useful for students to study and understand operation of phase shift oscillator and to observe the phase shift introduced by different RC stages of a phase shift oscillator.

Scientech Analog Electronics Experiment Boards are designed as a comprehensive Modular solution for beginners to explore the fundamentals of a variety of basic building blocks in Analog Electronics. The boards are very user friendly and support self learning through flexibility of making circuit connections. Schematic diagrams on the boards provide easy understating of the concepts. Test points are provided to observe the waveforms/ signals and to measure voltages at different nodes. The boards can be used as standalone unit with external DC Power Supply, and Function Generator or can be used with Scientech Analog Labs; Scientech 2612/ Scientech 2612A / Scientech 2613. These labs have built in DC Power Supply, AC Power Supply, Function Generator, Modulation Generator, Continuity Tester, Toggle Switches, and Potentiometers. Product Tutorial with theory, description, explanation, procedure, references and results is available online on www.ScientechLearning.com .

Features

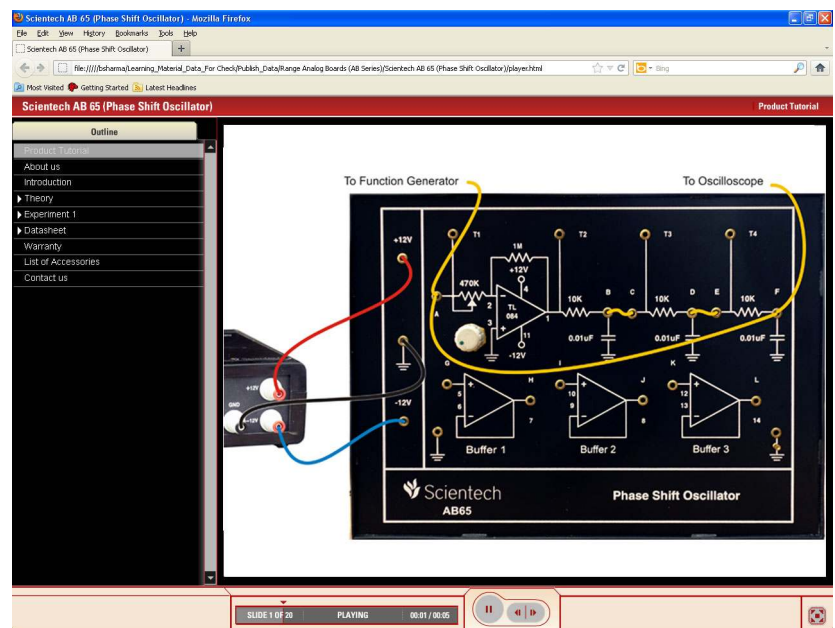

- ▶ On board test points to observe signals
- ▶ On board schematic diagram
- ▶ Flexibility of making circuit connections
- ▶ Light weight & compact
- ▶ Online Product Tutorial

Scope of Learning

- Study the operation of Phase shift oscillator with and without buffer between RC sections

Optional

- AD-01 DC Power Supply ($\pm 12V$, $\pm 5V$)
- Simtel Analog Electronics Software

Online Product Tutorial
